Why Costing Matters

foundation of a profitable edible candle business starts with knowing
numbers.

Many artisan food creators start selling based on a gut feeling about what their products should cost. They look at a candle they spent an hour making, pick a number that "feels right," and hope for the best. This approach almost always leads to one of two outcomes: **underpricing** (where you work hard but barely break even) or **overpricing** (where customers walk away).

This planner exists to make sure neither of those happens to you.

The Goal Is Simple

Know exactly what each candle costs you to make, so you can set a price that covers your costs, pays you fairly for your time, and leaves room for profit.

Three Reasons Costing Matters

Avoid Underpricing

When you do not know your true cost per candle, you risk selling at a loss without realizing it. Ingredients, packaging, and your time all add up faster than most people expect.

Understand Your Margins

Your margin is the difference between what a candle costs you and what you sell it for. Healthy margins let you reinvest in better ingredients, new recipes, and marketing.

Build a Sustainable Business

A hobby can run at break-even. A business cannot. Proper costing is what separates someone who makes candles for fun from someone who builds a brand that lasts. When you know your numbers, you make confident decisions about what to sell, where to sell it, and how to grow.

The Hidden Cost Trap

Most new sellers forget at least one cost category. They price based on ingredients alone and forget about packaging, labels, their time, or the gas to deliver orders. This planner walks you through every category so nothing slips through the cracks.

How to Use This Planner

1. **Read through Sections 1–3** to understand the concepts behind costing and pricing.
2. **Print the worksheets in Section 4** and fill them in for each of your recipes.
3. **Choose your pricing strategy** (Section 3) and apply it using the worksheets.
4. **Use the tracking templates in Section 7** to monitor your sales and adjust over time.

5. **Check the Break-Even Analysis (Section 8)** to know how many candles you need to sell to cover your startup costs.

6. **Keep the Quick Reference Card (Section 10)** in your workspace for fast lookups.

All dollar amounts in this planner are in USD. These are example figures. Your actual costs will vary based on your location and suppliers.

Understanding Your Costs

Understanding Your Costs

y edible candle you make has four cost categories. Let's break each down.

To price accurately, you need to account for every dollar that goes into producing a single candle. We will use a **Rosemary-Garlic Herb Butter Candle** as our running example throughout this section.

These are example figures. Your actual costs will vary based on your location and suppliers.

A. Ingredients Cost Per Candle

This is usually the largest portion of your cost. List every ingredient, how much you use per candle, and what that amount costs you. Here is an example breakdown:

Example: Rosemary-Garlic Herb Butter Candle (1 candle)

INGREDIENT	AMOUNT PER CANDLE	PACKAGE SIZE	PACKAGE PRICE	COST PER CANDLE
Unsalted butter	4 oz	16 oz (1 lb)	$4.50	$1.13
Fresh rosemary	1 sprig (3g)	1 oz bunch (28g)	$2.00	$0.21
Garlic (roasted)	2 cloves (10g)	1 head (~10 cloves)	$0.60	$0.12
Sea salt	1/4 tsp (1.5g)	26 oz (737g)	$3.50	$0.01
Edible wick material	1 wick	Pack of 50	$8.00	$0.16
Decorative herbs (dried)	1 tsp	1 oz jar	$3.00	$0.19
Total Ingredients Cost				**$1.82**

> **Tip: Buy in Bulk**
> Ingredients cost per candle drops significantly when you buy in larger quantities. A restaurant supply store or wholesale club can cut your butter cost by 20–30% compared to a regular grocery store.

B. Packaging Cost Per Unit

Every candle needs packaging, whether you sell at a market or ship online. Here is a typical breakdown:

PACKAGING ITEM	PACK SIZE	PACK PRICE	COST PER CANDLE
Glass jar or ramekin (4 oz)	Pack of 12	$18.00	$1.50
Label (printed)	Roll of 100	$12.00	$0.12
Shrink wrap band	Pack of 100	$6.00	$0.06
Gift box (if applicable)	Pack of 25	$20.00	$0.80
Tissue paper / filler	Pack of 100 sheets	$5.00	$0.05
Total Packaging Cost (with box)			**$2.53**
Total Packaging Cost (without box)			**$1.73**

Which Packaging Level?

For farmers' market sales, you might skip the gift box. For online orders or retail, the box adds perceived value and protects the product during shipping. Price each configuration separately.

C. Labor Time

Your time has value. Even if you enjoy making candles, you need to account for the hours you spend to run a real business.

How to Calculate Your Labor Cost Per Candle

1. **Decide your hourly rate.** A common starting point is $15–$25/hour for artisan food production. Choose a rate that feels fair for your skill level and market.
2. **Time yourself making one batch.** Include prep, cooking/melting, assembly, cleanup, and packaging. Be honest and count everything.
3. **Divide total time by number of candles.** If a batch of 6 takes you 90 minutes, that is 15 minutes per candle.
4. **Multiply.** At $20/hour, 15 minutes = $5.00 per candle in labor.

LABOR COST FORMULA

(Hourly Rate ÷ 60) × Minutes Per Candle = Labor Cost

EXAMPLE: ($20 ÷ 60) × 15 = $5.00

D. Overhead Costs

Overhead covers the expenses that are not tied to a specific candle but still cost you money. These are often overlooked.

OVERHEAD ITEM	MONTHLY COST (EST.)	CANDLES PER MONTH (EST.)	COST PER CANDLE
Kitchen utilities (gas/electric, water)	$30.00	100	$0.30
Equipment depreciation*	$10.00	100	$0.10
Market booth fee (if applicable)	$50.00	100	$0.50
Food handler's permit (annual ÷ 12)	$5.00	100	$0.05
Shipping materials (if selling online)	$25.00	100	$0.25
Total Overhead Per Candle			**$1.20**

**Equipment depreciation: if you bought a $360 double boiler that lasts 3 years, that is $10/month. Divide by the number of candles you produce per month.*

E. Total Cost Per Candle

Now we add up all four categories for our Rosemary-Garlic Herb Butter Candle example:

COST CATEGORY	AMOUNT
Ingredients	$1.82
Packaging (with gift box)	$2.53
Labor (15 min at $20/hr)	$5.00
Overhead	$1.20
Total Cost Per Candle	**$10.55**

THE MASTER FORMULA

Ingredients + Packaging + Labor + Overhead = Total Cost

$1.82 + $2.53 + $5.00 + $1.20 = $10.55

Do Not Skip Any Category

If you price based on ingredients alone ($1.82), you would need to sell each candle for at least $10.55 just to break even. That is a $8.73 gap that many new sellers miss entirely.

Pricing Strategies

proven approaches to setting prices that work for artisan food ducts.

A. Cost-Plus Pricing

The simplest method: take your total cost and add a markup percentage. This guarantees you make a profit on every sale.

COST-PLUS FORMULA

Total Cost × (1 + Markup%) = Selling Price

Common Markup Ranges for Artisan Food

MARKUP	BEST FOR	EXAMPLE (COST $10.55)
50% (1.5×)	High-volume, low-cost items	$15.83
100% (2×)	Standard retail / farmers' market	$21.10
150% (2.5×)	Premium/luxury positioning	$26.38
200% (3×)	Ultra-premium / gift market	$31.65

The 2× Rule of Thumb

For most artisan food products sold directly to consumers, a 2× markup (100% margin) is a healthy starting point. It covers unexpected costs, gives you room to offer occasional discounts, and pays you fairly.

B. Market-Based Pricing

Research what competitors charge for similar products, then position yourself accordingly.

How to Research Competitor Pricing

- Visit local farmers' markets and note prices for artisan food candles or specialty butter products.
- Search Etsy, Amazon Handmade, and specialty food sites for comparable products.
- Note the price range (low, mid, high) and what each tier offers in terms of packaging, size, and presentation.
- Decide where your product fits: budget, mid-range, or premium.

Competitor Research Notes

COMPETITOR / SOURCE	PRODUCT	SIZE	PRICE	NOTES

PRICE RANGE I FOUND (LOW – HIGH)

WHERE I WANT TO POSITION MY PRODUCT

C. Value-Based Pricing

This strategy prices based on the **perceived value** to the customer, not just your costs. Edible candles are a perfect fit for value-based pricing because they are unique, experiential, and make great gifts.

What Increases Perceived Value

Presentation
A candle in a branded gift box with tissue paper and a recipe card feels worth more than the same candle in a plastic bag.

Uniqueness
"Rosemary-Garlic Herb Butter Candle" sounds more premium than "Butter Candle." Unique flavor combinations justify higher prices.

Story
Handmade, small-batch, locally sourced, family recipe. The story behind your product adds perceived value.

Experience
Edible candles are a conversation piece. People pay for the experience of lighting, melting, and eating a candle at a dinner party.

Value-Based Pricing in Practice

If your total cost is $10.55 and your cost-plus price would be $21.10, but customers see your beautifully packaged candle as a $30 gift item—then $27–$30 is a justified price. The key is testing: start higher and see how the market responds.

D. Psychological Pricing

Small pricing tweaks can have a meaningful impact on how customers perceive your prices.

TECHNIQUE	EXAMPLE	WHY IT WORKS
Charm pricing	$12.99 instead of $13.00	People read left-to-right; $12.99 "feels like" $12.
Round pricing	$15.00 instead of $14.75	For luxury/gift items, round numbers feel more premium and intentional.
Anchor pricing	Show $30 retail, sell for $22	The higher number makes the actual price seem like a deal.
Bundle pricing	"3 for $36" instead of "$14 each"	Encourages larger purchases and increases average order value.
Tiered pricing	Small $8 / Medium $13 / Large $18	Most people pick the middle option; set your most profitable candle there.

For Edible Candles Specifically

Round pricing tends to work better than charm pricing for artisan food gifts. A $15 candle feels more premium than $14.99. Save the .99 endings for volume sales or market pricing.

Margin Calculator

t these worksheets and fill one in for each recipe in your collection.

These worksheets are designed to be printed and filled in by hand. Complete one per recipe so you have a clear cost picture for your entire product line.

These are example figures. Your actual costs will vary based on your location and suppliers.

Per-Recipe Cost Worksheet

RECIPE NAME

DATE CALCULATED

INGREDIENT	AMOUNT NEEDED	COST PER UNIT	COST PER CANDLE
Total Ingredients Cost			

PACKAGING COST PER CANDLE

LABOR COST PER CANDLE (MINUTES × HOURLY RATE ÷ 60)

OVERHEAD COST PER CANDLE

TOTAL COST PER CANDLE: $_____

Batch Cost Worksheet

Calculate how your per-unit cost changes when you make larger batches. Buying ingredients in bulk and spreading your labor across more candles lowers the cost per candle.

RECIPE NAME

COST CATEGORY	PER CANDLE (BATCH OF 1–2)	BATCH OF 6	BATCH OF 12	BATCH OF 24
Ingredients (per candle)				
Packaging (per candle)				
Labor (per candle)				
Overhead (per candle)				
Total Per Candle				
Savings vs. Single	—			

Batch Savings Tips

Labor: Making 12 candles rarely takes 12× longer than making 1. You do prep once, clean up once. Expect 30–50% labor savings per candle in a batch of 12 vs. making them one at a time.

Ingredients: Bulk pricing on butter, jars, and wicks can save 15–25% per unit. Track the actual savings here.

Pricing Worksheet

Use your total cost from the Per-Recipe Worksheet, choose your markup, and calculate your selling price.

RECIPE NAME

TOTAL COST PER CANDLE (FROM PER-RECIPE WORKSHEET)

PRICING METHOD	CALCULATION	RESULT
Cost-Plus (2× markup)	Cost × 2.0 =	
Cost-Plus (2.5× markup)	Cost × 2.5 =	
Cost-Plus (3× markup)	Cost × 3.0 =	
Market-Based (competitor avg.)	From research:	
Value-Based (perceived value)	Customer would pay:	

MY CHOSEN SELLING PRICE

Selling Price	
Minus Total Cost	
= Profit Per Candle	
Profit Margin % (Profit ÷ Price × 100)	

Gift Set Pricing

dling candles into sets increases your average order value and
eived value.

Gift sets are where edible candles really shine. A single candle is a nice treat. A curated set of three or four flavors in a beautiful box becomes a premium gift people are excited to give (and receive).

Bundle Pricing Strategy

The key to bundle pricing is offering a small discount compared to buying individually, while increasing your total revenue per customer. Here is how it works:

Example: Individual Candle Price = $22.00

SET SIZE	FULL PRICE (NO DISCOUNT)	BUNDLE DISCOUNT	BUNDLE PRICE	PER-CANDLE IN BUNDLE	SAVINGS FOR CUSTOMER
2-Pack	$44.00	10%	$39.60	$19.80	$4.40
4-Pack	$88.00	15%	$74.80	$18.70	$13.20
6-Pack	$132.00	20%	$105.60	$17.60	$26.40

These are example figures. Your actual costs will vary based on your location and suppliers.

Why Bundles Work

Even with a 20% discount on a 6-pack, you earn $105.60 from one customer instead of $22.00. Your cost per candle is the same (or lower, since you likely make them in a batch). The customer feels like they got a deal. Everyone wins.

Gift Set Configurations

STARTER
The Duo
2 complementary flavors
Simple gift sleeve
$39
Customer saves ~10%

POPULAR
The Sampler
4 curated flavors
Branded gift box + card
$75
Customer saves ~15%

BEST VALUE
The Collection
6 signature flavors
Premium box + pairing guide
$106
Customer saves ~20%

CUSTOM
Build Your Own
Customer picks 3–6 flavors
Custom label option
Varies
10–15% off individual price

Gift Set Cost Considerations

- **Box or packaging upgrade:** Gift sets need nicer packaging. Factor in a premium box ($2–$5 per set), ribbon, tissue, and a printed card.
- **Variety packs need inventory:** If you offer a 4-flavor sampler, you need to keep all four flavors in stock. Plan your production schedule accordingly.
- **Shipping costs increase with weight:** A 6-pack in glass jars is heavy. Know your shipping cost before you finalize your bundle price.
- **Custom sets take more time:** If you offer "build your own" sets, account for the extra labor of picking and packing individual selections.

Gift Set Pricing Worksheet

LINE ITEM	2-PACK	4-PACK	6-PACK	CUSTOM
Candle cost (× quantity)				
Premium packaging				
Extra labor (assembly)				
Printed card / inserts				
Total Set Cost				
Set Selling Price				
Profit per Set				

Seasonal Pricing Adjustments

Seasonal Pricing Adjustments

hand for edible candles fluctuates throughout the year. Your pricing uld reflect that.

Edible candles are inherently seasonal products. Demand peaks during the holidays, dips in summer, and spikes around gift-giving occasions. Smart pricing takes advantage of these patterns without alienating your customers.

The Seasonal Calendar

SEASON / EVENT	DEMAND LEVEL	PRICING ADJUSTMENT	NOTES
November – December (Holidays)	Peak	+15–25% premium	Gift packaging essential. Offer sets prominently.
February (Valentine's Day)	High	+10–20% premium	2-pack "date night" sets. Romantic flavors.
March – May (Spring)	Moderate	Standard pricing	Mother's Day, Easter, bridal showers.
June – August (Summer)	Lower	Standard or –10%	Outdoor events, BBQ-themed savory candles.
September – October (Fall)	Rising	Standard pricing	Fall flavors (pumpkin, cinnamon, apple). Build stock.
Weddings / Corporate Events	Variable	+20–30% premium	Custom labels, bulk orders. Price per project.

How to Implement Seasonal Pricing

Holiday Premiums

During peak gift-giving seasons, upgrade your packaging and raise your price to match. Customers expect to pay more for holiday-ready products. A candle in a holiday gift box with a ribbon is a different product than the same candle at a farmers' market.

Off-Season Strategy

Rather than lowering your regular price, offer a seasonal flavor at a slightly lower price point. This clears ingredients, keeps customers engaged, and avoids devaluing your core products.

Event Pricing

Wedding favors, corporate gifts, and party supplies deserve event pricing. You are providing customization, coordination, and often rush delivery. A 20–30% premium on top of bulk pricing is standard for custom event work.

Limited Editions

Create seasonal flavors available only for a short time. Scarcity increases perceived value. A "Winter Spice Collection" available only in November–December justifies a higher price and creates urgency.

Reorder Rule of Thumb

Set your reorder point at the amount you need for 2 weeks of production. This gives you a buffer for supplier delays without overstocking perishable ingredients.

Break-Even Analysis

Break-Even Analysis

many candles do you need to sell to cover your startup costs and profiting?

Before your business earns a profit, you need to cover your upfront investments: equipment, initial ingredient purchases, packaging supplies, permits, and any marketing costs. The break-even point is the number of candles you need to sell before those investments are paid back and every additional sale is pure profit.

BREAK-EVEN FORMULA

Fixed Costs ÷ (Selling Price − Variable Cost Per Candle) = Break-Even Units

Understanding the Terms

Fixed Costs (One-Time)

Equipment, initial supplies, permits, branding/logo, first batch of labels and packaging. These are costs you pay regardless of how many candles you sell.

Variable Cost Per Candle

Your total cost per candle (from Section 2): ingredients + packaging + labor + overhead. These costs occur each time you make a candle.

Example Break-Even Calculation

FIXED COST ITEM	AMOUNT
Double boiler + basic equipment	$150.00
First batch of jars (48 units)	$72.00
Labels (first print run, 200 units)	$24.00
Food handler's permit	$50.00
Farmers' market first booth fee	$50.00
Initial ingredient stock	$80.00
Total Fixed Costs	**$426.00**

USING OUR EXAMPLE NUMBERS

$426 ÷ ($22.00 − $10.55) = $426 ÷ $11.45 = 38 candles

YOU NEED TO SELL 38 CANDLES TO BREAK EVEN. EVERY CANDLE AFTER THAT EARNS YOU $11.45 IN PROFIT.

These are example figures. Your actual costs will vary based on your location and suppliers.

My Break-Even Worksheet

Step 1: List Your Fixed (Startup) Costs

FIXED COST ITEM	AMOUNT
Total Fixed Costs (A)	

Step 2: Your Numbers

MY SELLING PRICE PER CANDLE (B)

MY VARIABLE COST PER CANDLE (C) — FROM PER-RECIPE WORKSHEET

PROFIT PER CANDLE (B - C) = (D)

Step 3: Calculate Break-Even

Total Fixed Costs (A) ÷ Profit Per Candle (D) = _____ candles to break even

IF I SELL _____ CANDLES PER WEEK, I WILL BREAK EVEN IN _____ WEEKS.

IF I SELL _____ CANDLES PER MONTH, I WILL BREAK EVEN IN _____ MONTHS.

Common Pricing Mistakes

Common Pricing Mistakes

n from these frequent errors so you do not repeat them.

Mistake #1: Pricing Based on Ingredients Only

In our example, ingredients cost $1.82 per candle. The true cost was $10.55. If you set your price at $5 thinking you are making a profit, you are actually losing $5.55 on every candle you sell. Always include **all four cost categories**: ingredients, packaging, labor, and overhead.

Mistake #2: Not Paying Yourself

"I enjoy making them, so I don't count my time." This mindset is fine for a hobby but fatal for a business. If you spend 15 hours a week making and selling candles at no labor cost to yourself, you are volunteering. Assign yourself an hourly rate and treat it as a real cost.

Mistake #3: Copying Competitor Prices Without Knowing Their Costs

A competitor selling at $12 might be losing money, buying ingredients from a cheaper supplier, or making a completely different product. Use competitor pricing as *one data point*, never as your entire strategy. Your cost structure is unique.

Mistake #4: Racing to the Bottom

When sales are slow, the instinct is to lower prices. But cutting prices rarely increases volume enough to make up the difference. Instead of lowering price, **add value**: better packaging, a recipe card, a pairing guide, or a loyalty discount for repeat customers.

Mistake #5: One Price for Every Channel

A candle sold at a farmers' market (where you pay a booth fee) has different costs than one sold online (where you pay shipping and platform fees) or one sold wholesale to a store (where you give 40–50% off retail). Calculate your cost and margin for each sales channel separately.

Mistake #6: Forgetting About Platform Fees

If you sell on Etsy, at a farmers' market, or through a local store, there are fees: listing fees, transaction percentages, booth rental, or wholesale discounts. These are real costs that must be included in your pricing for that channel.

Mistake #7: Offering Too Many Discounts

Frequent discounts train customers to wait for sales. Use discounts strategically (bundles, loyalty rewards, seasonal promotions) rather than as a default response to slow sales.

Mistake #8: Not Reviewing Prices Regularly

Ingredient prices change. Supplier costs fluctuate. Your skill level improves (you get faster, which lowers your labor cost per candle). Review your cost worksheets every 3 months and adjust your prices if your margins have shifted.

The Golden Rule of Pricing

Know your numbers, trust your numbers, and charge what your numbers tell you to charge. Confidence in your pricing comes from knowing exactly what each candle costs you and exactly how much profit each sale generates.

Quarterly Pricing Audit Checklist

Complete this checklist every 3 months to keep your pricing healthy.

AUDIT DATE

- [ ] Recalculated ingredient costs (prices may have changed)
- [ ] Recalculated packaging costs
- [ ] Re-timed my production (am I faster now?)
- [ ] Updated overhead costs
- [ ] Compared my prices to competitors
- [ ] Reviewed my sales log: which flavors sell best?
- [ ] Reviewed my sales log: which channel is most profitable?
- [ ] Checked my profit margin: is it still above my target?
- [ ] Reviewed gift set pricing (still competitive?)
- [ ] Planned seasonal pricing for next quarter

CHANGES I AM MAKING THIS QUARTER

Quick Reference: Pricing Formula Card

t this page and keep it in your workspace for fast lookups.

The Four Cost Categories

1. Ingredients	All raw materials used in one candle (butter, herbs, spices, wick, decorations).
2. Packaging	Jar, label, shrink wrap, box, tissue, ribbon — everything the customer sees.
3. Labor	(Hourly rate ÷ 60) × minutes per candle. Include prep, assembly, cleanup, and packaging.
4. Overhead	Monthly fixed costs ÷ candles produced per month. Utilities, equipment, permits, fees.

Core Formulas

Total Cost Per Candle	Ingredients + Packaging + Labor + Overhead
Selling Price (Cost-Plus)	Total Cost × Markup Multiplier (e.g., 2.0 for 100% margin)
Profit Per Candle	Selling Price − Total Cost
Profit Margin %	(Profit ÷ Selling Price) × 100
Break-Even Units	Fixed Costs ÷ Profit Per Candle
Labor Cost Per Candle	(Hourly Rate ÷ 60) × Minutes Per Candle

Markup Quick Table

MULTIPLIER	MARKUP %	MARGIN %	IF COST = $10
1.5×	50%	33%	Sell at $15.00
2.0×	100%	50%	Sell at $20.00
2.5×	150%	60%	Sell at $25.00
3.0×	200%	67%	Sell at $30.00

Pricing Reminders

- Include **all four cost categories** before setting any price.
- For artisan food sold direct to consumer, a **2× markup** is a solid starting point.
- Round prices ($15, $20, $25) work better than charm prices for premium/gift items.
- Bundle discounts: 10% for 2-pack, 15% for 4-pack, 20% for 6-pack.
- Holiday premiums: +15–25% during peak gift-giving seasons.
- Review and recalculate every 3 months.
- Wholesale pricing = 40–50% below retail. Only offer wholesale if your margins allow it.

All example figures in this planner are illustrative. Your actual costs will vary based on your location, suppliers, and production methods. Review and update your worksheets regularly.
